【Orientation Outline】

① About the Test

② Test Day Flow

③ Result Notification Flow

④ About Consultations

⑤ Confirmation of Intention to Take the Test

We will be discussing steps ① to ⑤ individually.
Your time and attention are very much appreciated.

① About the Test

This test is free and anonymous.

Blood extraction will be done by a registered nurse.

You will get your results online.

Your privacy will be protected!

<September 7>
Get tested

- You will be identified by your application ID (reservation number).
- Blood extraction will be done by a nurse.
- The password for viewing your results will be indicated on the test voucher you will get at reception.

<From September 8>
Get results

- You may access your results online. (Your application ID, password, and date of blood extraction are required.)

The test may be cancelled in the event of a weather emergency or natural disaster. In that case, notices will be posted on the official website (itesting.jp/en/) and on the Nagoya City website (<https://www.hiv-stiguide.city.nagoya.jp/>). Please check before coming to the test.

① About the Test

【Infections tested】

HIV

Syphilis

Hepatitis B

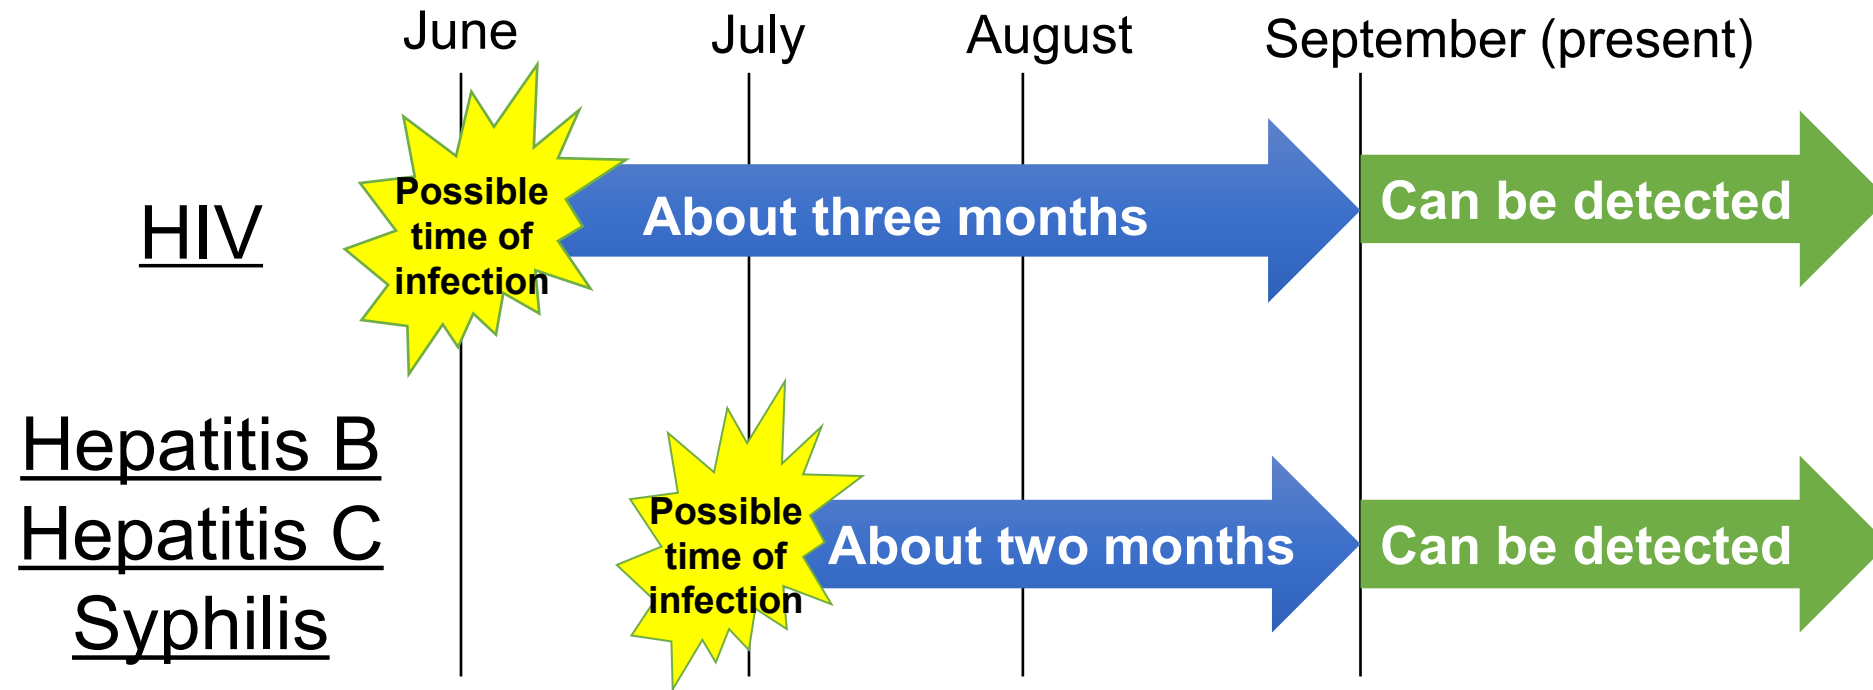

Hepatitis C

* You will be tested for these four diseases.

Please **take all four types of tests** even if you have contracted them in the past or are unsure of your medical history.

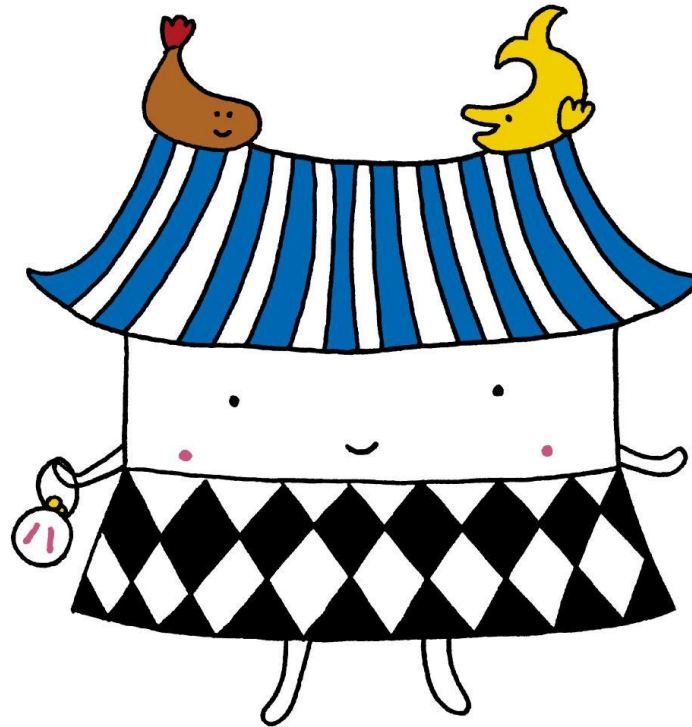

① About the Test

How soon after I get infected can the test detect it?

- * HIV may be detected **three months** after infection. Hepatitis B, hepatitis C, and syphilis may be detected **two months** after infection.
- * HIV: The test will detect infections that occurred by early June 2025.
- * Hepatitis B, hepatitis C, and syphilis: The test will detect infections that occurred by early July 2025.
- * Diseases contracted before the time of infection indicated may not be detected.

When you make your appointment, please...

Make sure to enter valid contact info!

Please enter a valid email address or phone number.

Nagoya Medical Center will contact you ONLY IF there is something to report and your results have not been accessed two weeks after the test.

* Your contact information will not be shared with any other organization.

Take a screenshot of your confirmation screen with QR code

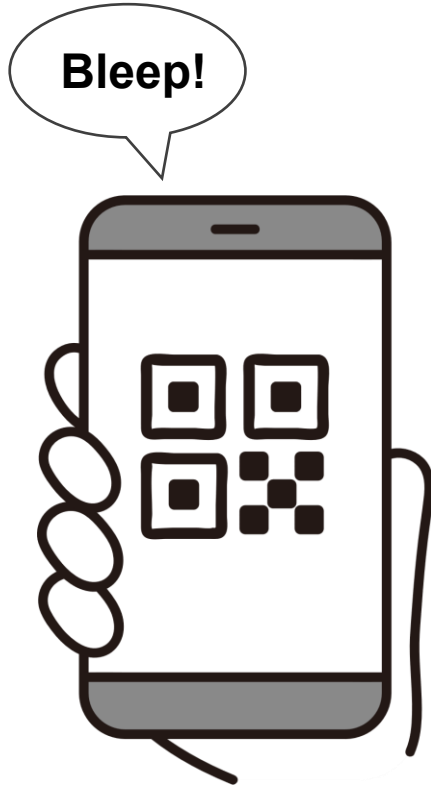

When your reservation is complete, you'll see a screen like this one:

Take and save a **screenshot with the QR code visible**. Showing the QR code at the test site reception will ensure you can be tested without any delays. Your cooperation will help the testing process run smoothly.

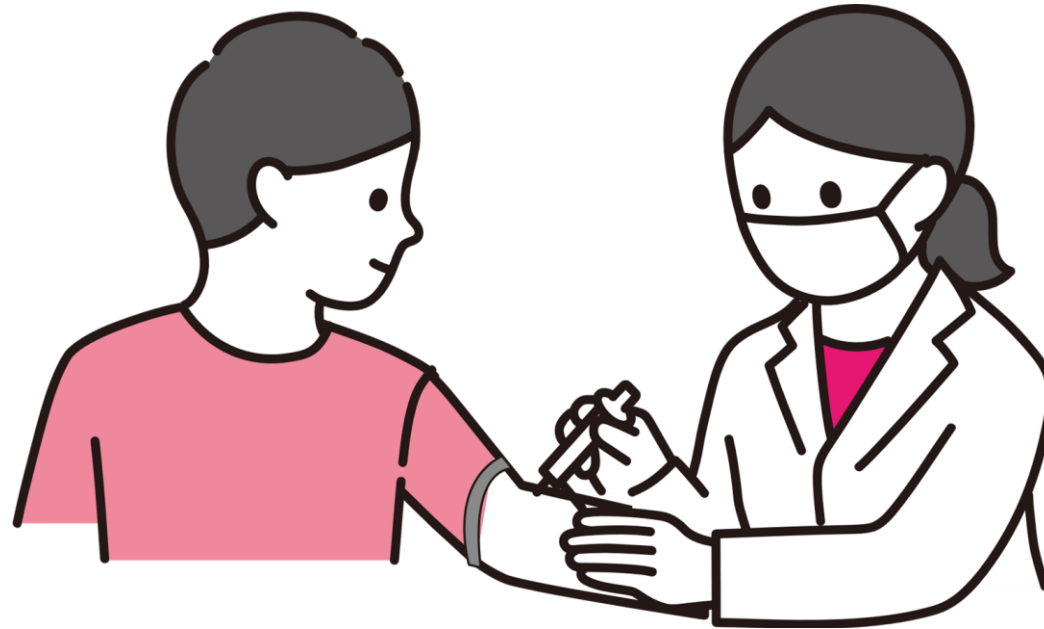

Please note that saving this sample does not mean you have made a reservation.

② Test Day Flow

Scan your QR code

Blood extraction by a nurse

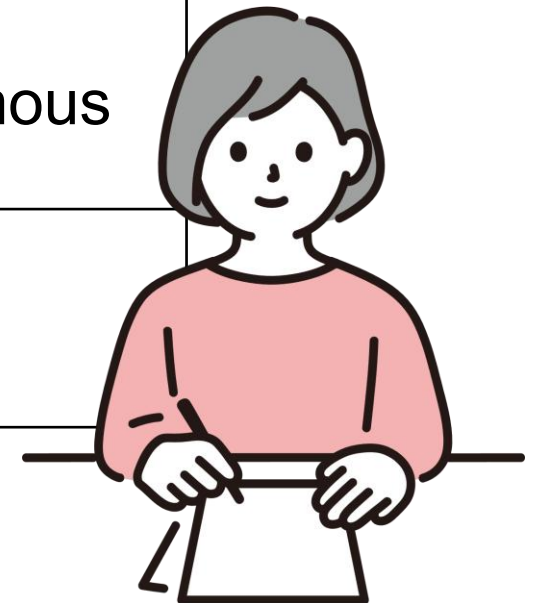

All done!

* All syringes and equipment are new and sterilized.

③ Results Notification Flow

Please complete our survey before getting your results

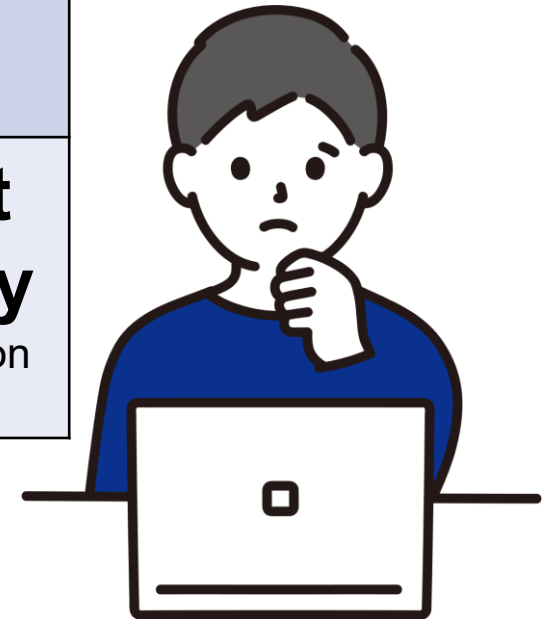

Purpose	Help us improve our testing and prevention program

Year Month Day

Input the information shown on your test voucher.

**The test voucher cannot be reissued.
Please be careful not to lose it.**

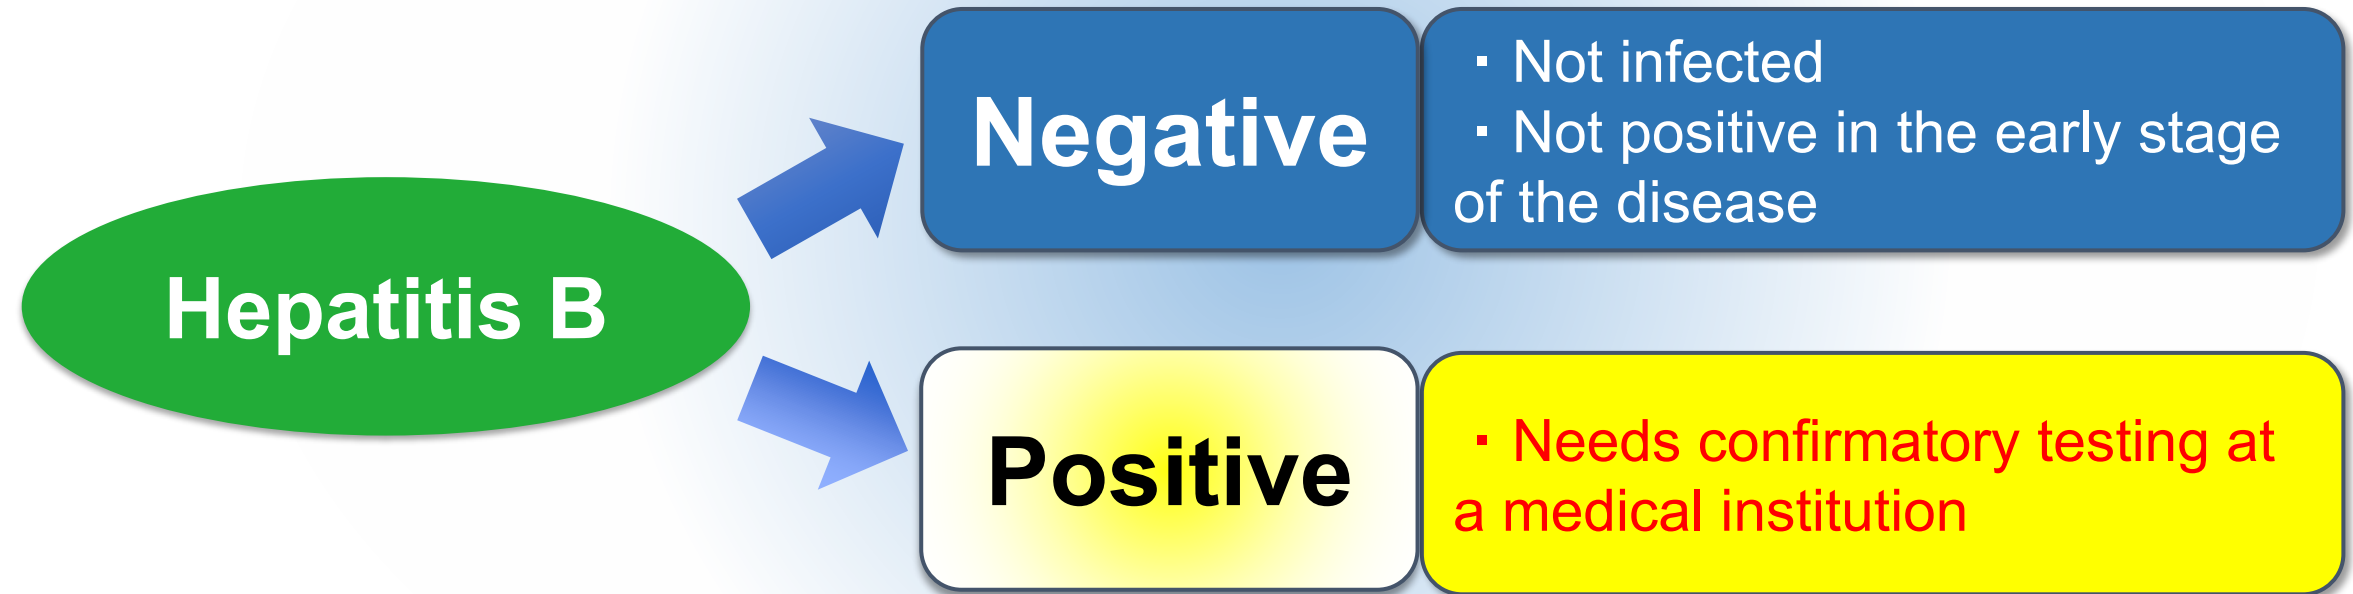

【Interpretation of the test results】

(1) HIV

【Interpretation of the test results】

(2) Hepatitis B

【Interpretation of the test results】

(3) Hepatitis C

Hepatitis C

```
graph LR; HC([Hepatitis C]) --> Neg[Negative]; HC --> Pos[Positive]; Neg --- NegList[Not infected<br/>Not positive in the early stage of the disease]; Pos --- PosList[Past and possibly current infection. Needs confirmatory testing at a medical institution.]
```

Negative

- Not infected
- Not positive in the early stage of the disease

Positive

- Past and possibly current infection. Needs confirmatory testing at a medical institution.

【Interpretation of the test results】

(4) Syphilis

As of 2023, we use RPR and TP tests.

RPR	TP	Diagnostic comments
(-)	(-)	Shows no infection.
(-)	(+)	Shows either an early stage of infection or syphilis after receiving treatment. <ul style="list-style-type: none">• Re-testing recommended in 2-4 weeks
(+)	(-)	Shows either an early stage of infection or a biological false positive. <ul style="list-style-type: none">• A "biological false positive" is when you have no infection and the positive is due to other factors.• Re-testing recommended in 2-4 weeks
(+)	(+)	Shows infection. See a doctor as soon as possible.

What to do if you test positive?

HIV

Syphilis

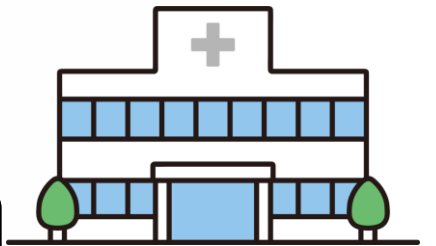

Hepatitis B

Hepatitis C

▪ **You will be referred to Nagoya Medical Center or another reliable medical institution.**

(Further testing will be done to confirm your current medical condition and to determine if treatment is necessary.)

- For those with HIV, Nagoya Medical Center will provide free confirmatory testing.
(You may request anonymity when registering for this test.)

If your HIV test comes out positive

A confirmatory test at Nagoya Medical Center is required.

With proper medication, you may not develop AIDS,
and you can live a normal life.

If you do not seek medical attention...
**you may develop AIDS and face the risk of dying
or suffering serious effects.**
